

TetraFauna Decorative Reptofilter Pump Cleaning Instructions

1. Remove the pump from the Decorative Filter.

2. Pull the front face/partial bottom plate off (this will slide off as there are guiding rails on the bottom of the pump).

3. As seen below, the "ribbed/vented" piece of the bottom plate slides off as one piece with the front plate.

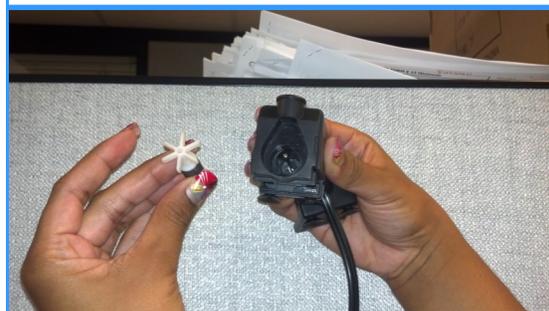

4. This is what you should see once the front/bottom plate is removed. The next step is to remove the white fan piece called the impeller.

5. Remove the impeller gently—you will feel a slight tension as the magnet releases from the pump.

6. Clean the impeller and the "well" of the pump thoroughly.

After thoroughly cleaning, place all components back together and return to your pump to the filter / water environment before turning on.

NEVER run in a dry environment!
