HOW IT WORKS

Boric acid can kill insects if they eat it. It disrupts their stomach and can affect their nervous system. It can also scratch and damage the exterior of insects. Boric acid and borax, a sodium borate salt, can kill plants by causing them to dry out. Sodium metaborate, another sodium borate salt, stops plants from producing the energy they need from light.

Data collected from the National Pesticide Information Center on January, 15th, 2021.

**DO-IT-YOURSELF
MOSQUITO KILLER**

ABOUT PRO TECH

Kills mosquitoes that may carry West Nile virus, Zika virus, Chikungunya, Dengue Fever, St. Louis encephalitis, Western equine encephalitis, Eastern equine encephalitis for up to 30 days.
