KMR[®] Liquid

Number 1 Selling Kitten Milk Replacer

Recommended as a food source for orphaned or rejected kittens or those nursing, but needing supplemental feeding. Also recommended for growing kittens or adult cats that are stressed and require a source of highly digestible nutrients.

- ◆ Supplies necessary vitamins and minerals to ensure proper development and growth.
- ◆ Formulated to provide a caloric pattern similar to queen's milk in protein, fat and carbohydrates.
- ◆ Easy to digest, highly palatable, sterile, ready to feed formula.
- ◆ Ideal supplement for post-surgery and convalescence.

READY TO FEED, NO MIXING NECESSARY.

DIRECTIONS FOR USE:

All kittens should receive the queen's milk for at least 2 days, if possible. The colostrum milk gives extra nutrition and temporary immunity against some diseases. **Feed at room or body temperature. KMR liquid may be fed at the daily rate of 2 tablespoons (30 mL) per 4 ounces (115 g) of body weight. The daily feeding rate should be divided into equal portions for each feeding.** Kittens' needs will vary and this amount may have to be increased or decreased, depending on the individual. Small or weak kittens may need to be fed KMR liquid every 3 to 4 hours, while larger kittens will do well when fed every 8 hours. Weigh the kittens daily to assure adequate feeding.

Consult your veterinarian for additional advice. Not for human consumption. Store in cool, dry conditions. This product is intended for intermittent or supplemental feeding only.

Pregnant and Lactation Queens / Growing Kittens (post weaning), show cats and/or convalescing cats: Feed 1 tablespoons (30 mL) per 5 lbs. (2.2 kg) of body weight daily.

Shake well. Refrigerate after opening. May be frozen, but do not freeze in original container. For detailed freezing instructions visit www.petag.com/freezing
